How to Increase Maximum Upload File Size in WordPress

Posted: October 27, 2018 / By: Yani I / In: How-To

How to increase maximum upload filesize in All-in-One WP ...

There are 4 ways that you can choose to increase the maximum upload file size in WordPress.

1. Use our plugin (easy)

<https://import.wp-migration.com>

2. Contact hosting provider (medium)

Reach over to the customer support of your hosting provider and ask them to increase these limits for you

If you are still unable to import your file, the easiest way to figure out the problem is to request error logs from your hosting provider for your website. Examine the logs around the time when you tried to import the backup.

You will see what limit you have encountered and increasing it will solve the issue.

3. Do it yourself (hard)

Edit *.htaccess* file

```
php_value upload_max_filesize 128M
php_value post_max_size 128M
php_value memory_limit 256M
php_value max_execution_time 300
php_value max_input_time 300
```

or

Edit *wp-config.php* file

```
@ini_set( 'upload_max_filesize' , '128M' );
@ini_set( 'post_max_size', '128M');
@ini_set( 'memory_limit', '256M' );
@ini_set( 'max_execution_time', '300' );
@ini_set( 'max_input_time', '300' );
```

upload_max_filesize – set this to a value > than your backup

post_max_size – set this to a value > than your backup

memory_limit – set this to a value > than your backup

max_execution_time – set this to 0 (infinite)
